

### Dictation

The authors work with the Nuance speech recognition „DMO“, „DPA“ or „DLA“ at one or more workstations in the network. Dictation takes place directly into the target application and the text appears immediately on the screen.

### Correction

During dictation by the author – either by voice or by typing over.

### Your benefits

**Time saving –  
Approx. 2 hours per working week\***

**Start with one click** and without password entry

**Easy inclusion of new words** from text

Parallel research and dictation via automatic **SpeechLock®** (dictation into a „locked“ window while working in other applications at the same time)

**Desktop Controller** for automating previously manual work steps – even outside from the speech recognition

**Even more time saving with the option „Integration\*\*“ –  
approx. 2 hours per working week\***

**Effective integration of speech recognition** into your patient or client management system

**Patient - or case related dictation** directly from the file into the dns.comfort SonicPad®

**Dictation of all necessary headings in one step** (e.g. anamnesis etc.) without further mouse clicks

**„Parking“ dictation** as a draft for later completion.

**Fully automated retransmission** to the file

\* Experience from existing installations in everyday practice

\*\* Available for over 80 systems

# dns.comfort.net PLUS – dictation with speech recognition at the network workstation

## Working in groups

**Optimal learning effect**- all authors in a group learn together and automatically exchange new and no longer usable words and commands

**Control and correction of changes to vocabulary or commands** possible at the end of the session

**Protection function for common vocabulary and commands** – Management of a reservation list per author; changes for the group only take effect after verification by third parties

## Comfort

**Vocabulary and command maintenance** also outside the speech recognizer interface

**Manufacturer-independent** integration of professional dictation hardware of all well-known manufacturers for dictation recording and control

## SonicPad®

**Secure dictation** through continuous instant storage of text and audio

**Overtyping correction** without audio data loss  
Flexible and fast **working with drafts**; access from all dictation workstations possible

**Insert text modules** of the speech recognizer by **mouse click**

**Retention of the dictation for a selectable period of time**, after it has been successfully exported; e.g. For checking purposes

## Security

**Word and command lists are managed centrally by dns.comfort**; when a new profile is created or the speech recognizer is changed, all data is immediately available again

**Dictation history with text and sound** for control and backup
